

Top Three Reasons You Need Veritas™ Resiliency Platform for your IT Service Continuity Needs

VERITAS™

1. Gain real-time visibility and control of IT service continuity health across global IT environments through a single web-based interface

Does your organization have centralized visibility and control of IT service continuity across global IT environments?

Being confident that your IT organization is meeting business defined SLAs can be challenging when your data centers and IT teams are spread across multiple locations. Through an easy-to-use web-based dashboard, Veritas™ Resiliency Platform gives you real-time visibility and control to help ensure all your business services are meeting defined Recovery Time Objectives (RTOs) and Recovery Point Objectives (RPOs).

2. Predictably meet critical Service Level Agreements (SLAs) set down by the business

Are you confident your business-critical services are protected against unwanted downtime?

Your business demands SLAs that include near-zero RPOs and RTOs for business-critical applications, and it is your responsibility to make sure IT is meeting those demands. Resiliency Platform lets you proactively and simply manage resiliency of hundreds and thousands of applications, virtual machines, and complex multitier business services—so you have predictability when it comes to IT resiliency. Simplify workload orchestration across dependent business service tiers with Virtual Business Services, easily perform cross-site migrations at the granularity you require with Resiliency Plan, and help ensure recovery readiness with rehearsal testing.

3. Maintain existing infrastructure investments and ensure your IT environments don't have you vendor-locked

Are you tired of managing resiliency across complex environments using multiple point solutions?

Gain the flexibility to use virtualization technologies, high availability solutions and data movers of your choice, while getting unmatched visibility and control of global IT service continuity. Get an easy-to-use, lightweight solution that is easy to install, does not require intensive training, and can be permissioned for various teams based on user access requirements.
