The UiPath Platform enables a fully automated enterprise™

A fully automated enterprise is where great things happen:
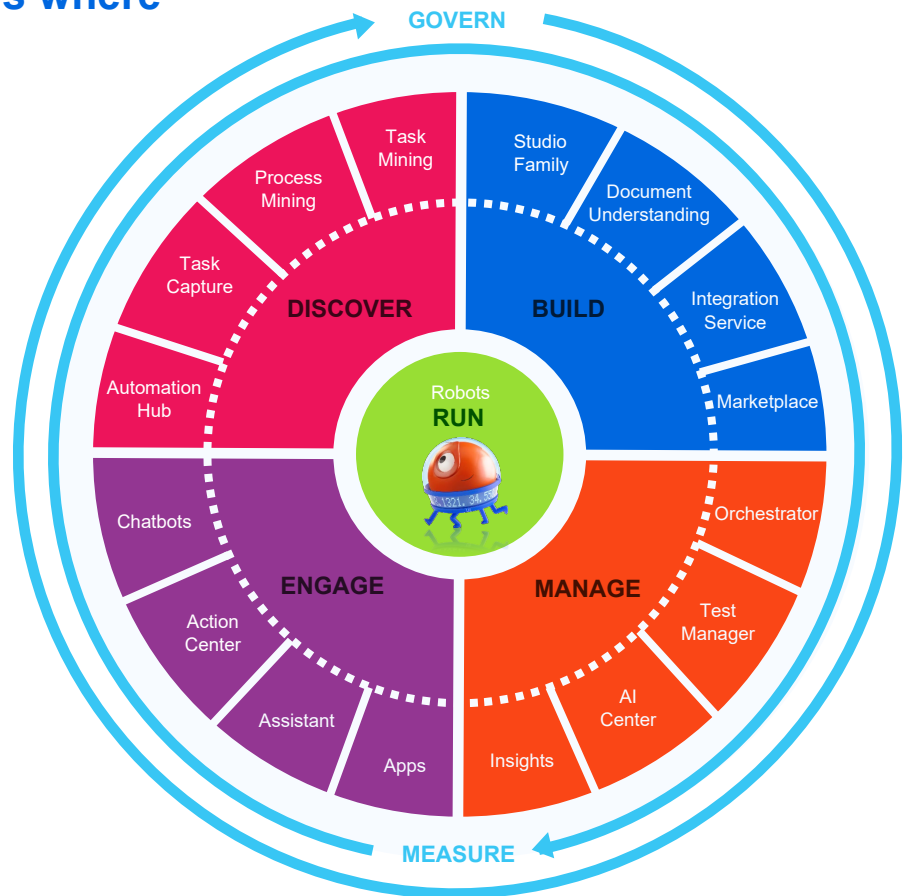

All automatable work is assigned to software robots. From the back-office to the front-office.

Everyone gets a personal "robot" assistant. A suite of ready-made automations on every person's desktop to help out with everyday work.

Technology fades into the background as the hundreds of applications and databases that sprawl across organizations today get integrated into a whole.

Anyone, with little to no coding, can develop automations and automation-powered applications.

AI permeates every facet of work as AI-skilled robots automate increasingly sophisticated business scenarios—driving productivity, efficiency, and customer satisfaction to new heights.

Automation Cloud

The UiPath Platform delivered as SaaS from UiPath

Automation Suite

The UiPath Platform delivered as a single containerized suite

Individual products

UiPath Platform products separately installed and managed

Everything you need to automate end-to-end, enterprise-wide

From discovering the best automation opportunities to measuring ROI—and everything in between, all integrated in a centrally managed, fully governed, secure platform that just keeps scaling.

Discover everything worth automating and manage your org-wide automation rollout

Automation Hub is the way to manage your automation rollout with instant visibility and control. Crowdsource automation ideas from employees with a simple submission form, see instant feasibility and ROI calculations, collect all the documentation for your future automations, and collaborate under one roof to get from automation discovery to build-out faster.

Process Mining analyzes the data from your business applications (like ERP and CRM) to tell you what end-to-end processes to automate and how to do it best—and be able to prove impact, too. Export the info to Automation Hub to speed up implementation and avoid manual information transfer.

Task Mining applies AI to expose patterns and variations in day-to-day tasks, scoring them for ease of automation and potential savings. Export the findings to process documents or to UiPath Studio directly for speedy bot-building.

Task Capture lets you automatically document attended processes as you work or detail out your unattended processes. Export the build-ready workflows directly to UiPath Studio. It simplifies the requirements-gathering process for both subject matter experts explaining a process, and the Center of Excellence (CoE) members providing production-grade automations.

"With Automation Hub, I showed leadership ROI in under an hour. I quickly clicked on the cost-benefit tab, said 'this is our savings,' and got funding approval for 10 robots."

Project Manager,
LexisNexis Risk Solutions

- **35 days → 2 days**
  for a BPO company using Process Mining to completely reengineer a client's insurance process and significantly reduce process cycle time

- **3 - 4 weeks less manual work** for every automation opportunity with Task Mining

- **60% less documentation time** with Task Capture

Build automations quickly, from the simple to the advanced

Studio is where developers build automations and test them, including the applications they rely on, like web, mobile, SAP, and virtualized desktops. There's API integration to an ever-growing list of applications, technologies, and platforms, and with pre-defined activities, drag-and-drop modeling, and a workflow recorder, simple tasks can be automated with minimal coding.

StudioX empowers everyone to create automations. If you can build a macro in Excel, you can build a bot in StudioX. Savvy employees—we call them citizen developers—will rapidly automate tasks for themselves and their team without the need for developer resources or coding knowledge.

Document Understanding is easy with UiPath. Drag and drop AI skills for data extraction and interpretation directly into your automations in UiPath Studio and let the bots process virtually any document type and format, including tables, checkboxes, even signatures and handwriting. Whenever the team chips in to validate data or handle exceptions, the bots learn and improve their accuracy over time.

Integration Service empowers developers to seamlessly combine world-class UI automation with API automation—simply and easily from within UiPath Studio. They can quickly build automations requiring APIs, as well as automations that traverse both API and non-API apps and systems—

"Even on a complex use case, if we have commitment from the business and process owners to document the requirements, the actual development literally takes just a few weeks"

VP of Global Automation and Head of CoE, Nielsen

- **Over 800 UiPath activities to choose from when developing automations**

- **88% faster in building the automation to production**

"Using UiPath Document Understanding, we can automatically read the PDFs, extract the relevant information and input accurate data into our systems. This was a big problem we've had for a very long time. Within 2 weeks, we were able to build a working solution that can be rolled out to teams globally."

Senior RPA Developer, Alter Domus

—like those involving both modern and legacy technologies. Integration Services also enables centralized governance of API access. Choose from a large and growing catalog of prebuilt, best-in-class connectors, use Activity Packs for a uniform integration experience across all UiPath Studio/StudioX designers, and have robots react and respond automatically with server-side triggers.

Marketplace for hundreds of pre-built RPA and AI templates and solutions to automate more, faster. Kickstart new RPA projects by accessing dozens of UiPath Marketplace templates from UiPath Studio directly. If you're a contributor, bring your RPA content to more than 100,000 Marketplace users, including enterprise customers, RPA developers, and automation experts.

- **50+ pre-built connectors to automate commonly used systems** such as Salesforce, Workday, Microsoft Office 365 and Google Drive

- **1300+ reusable RPA components** that extend and complement the UiPath Platform **across industries, technologies, and use cases**

Run automations through intelligent, reliable, flexible software robots that can take on a huge range of tasks

UiPath Robots can automate practically anything. They read documents, recognize dynamic interfaces, and understand conversations. Whatever technology you work with, they will too!

Attended Robots work side-by-side with the people in your organization via **UiPath Assistant.** It's a desktop launchpad that provides your workforce with easy access to attended automations to help with their day-to-day tasks—and gives CoEs full centralized control.

**> 34 million euros
in savings with 400+ robots** in the first 2 years for Orange™

60 robots built and deployed in 30 days by Dentsu to complete a large-scale data extraction and migration project, **saving more than 125,000 hours of work**

Unattended Robots work independently in the background and handle task-heavy, long-running processes. They check in with the team for validation, or if there's a question or exception, via UiPath Action Center.

Test Robots are unattended robots programmed to run automated test cases against applications or RPA workflows. Run test robots on multiple machines in parallel.

"The robots make it easier to use systems so people can concentrate on customers, not technology. They also reduce training time. Because the robots also pick up actions after calls, staff can be available for other customers."

Business Analyst,
RMG

Manage, deploy, and optimize automations across the enterprise

Orchestrator is the heart of your automation management. Deploy, monitor, optimize, and ensure the security of your entire digital workforce with enterprise-scale integration and compliance—no matter what size your business is. Try UiPath Orchestrator instantly as SaaS from the UiPath Automation Cloud™ or on-premises, in virtual machines, in private or public cloud, Linux VM or as a cloud native single containerized suite via UiPath Automation Suite.

Test Suite enables you to govern and monitor the quality of your automations. It facilitates test planning and execution, requirements, and defect traceability. It includes comprehensive test reporting and seamlessly adapts to your environment with out-of-the-box integrations.

- **Lower your TCO** through enterprise-scale management that integrates with the systems you already use

40% less automation maintenance with UiPath Test Suite

TestingXperts study

3X faster to automate application tests, thanks to a low-code, workflow-based approach, and pre-built components.

TestingXperts study

Insights offers powerful embedded analytics to measure, report, and align automation operations with your specific KPIs and strategic business outcomes. Available for cloud or on-premises deployments, with unlimited viewers and unlimited dashboards.

*"The ROI dashboard in UiPath Insights is amazing. It's **very easy to calculate not just the hours saved but the other positive impacts** we deliver that benefit our company."*

Chief Digital Officer,
Security Benefit Life Insurance Company

Data Service brings powerful no-code data modeling and storage to your automations while ensuring seamless access, enterprise-grade security, and scalability of the data.

*"**The bonus was having Data Service to store the data extracted from the process**, and then we use this data to create the spreadsheets."*

Senior RPA Developer,
Alter Domus

AI Center lets you easily consume machine learning models. Use ours or add yours, and just drag and drop them into your automation workflows via UiPath Studio. Monitor and manage your robots' AI skills, and constantly train and improve skills with human-validated data.

*"When you start to use AI in the various ways that UiPath offers, **AI Center really broadens the type of process that you can go after from an automation perspective.**"*

Intelligent Automation & Process Excellence
Manager, Heritage Bank

Engage people and robots as one team for seamless collaboration on any process

Apps lets you build, use, and share elegant automation-powered business apps, the low-code way. Create visually appealing professional apps quickly using only a web browser through a rich library of drag-and-drop controls. An app can be connected to a single automation or to as many automations as you like.

*"**Apps is a super-capable platform to engage with attended and unattended robots.** Best of all, we as RPA Developers don't have to build user interfaces from scratch, and it's 50% faster than custom development."*

Frank Schikora
Head of Delivery, Roboyo, and UiPath MVP

Action Center brings a human in the loop when automating advanced processes that require exceptions, escalations, and approvals. Automate end-to-end business processes through seamless human-robot collaboration from a single platform.

Assistant is the fully governed and easy-to-use launchpad that lets all employees interact with robots and robot-powered Apps right on their desktops.

An engaging desktop interface lets people see and run all the automations their company has approved for them, including ready-to-go automations from the UiPath Marketplace or the internal automation store in Automation Hub.

When automations run, they run in parallel on a desktop copy, so people can go about their own work undisturbed.

And because Assistant is integrated also with Task Capture, anyone can kick-start documenting their soon-to-be-automated processes from the Assistant launchpad.

Chatbots simplify access to the information, tools, and resources teams need in order to interact with customers.

UiPath natively integrates the leading no-code, AI-powered chatbot from Druid into the UiPath Platform to help you automate conversations between people as easily as you automate any other process. Trigger robots to do things like checking order status or posting data in your CRM through chat windows, social messaging apps, or even voice. In plain language.

"90% faster. That's how much quicker our international trading client is able to process sales contracts and purchase orders with UiPath Apps and Data Service."

Senior Consultant,
Assurity Consulting

"The ultimate goal is to arm all of our employees with a virtual assistant. There isn't a team or process that can't benefit from AI and RPA."

Chief Automation Officer,
Dentsu

150.000 EY employees got 30% of their time back thanks to UiPath Assistant, the attended bot that does all the repetitive work for the top 20 transaction across SAP, so no one else has to.

"With the UiPath-Druid integration, we've cut the credit deferral request process from 10 minutes to 20 seconds"

Director Project Management,
OTP Bank

Measure and govern your automation program end-to-end at any scale

Run an effective program and maximize your return on automation by measuring operational and business impact with **UiPath Insights**.

Govern how automations are built and what users can do with them. There are rich role-based access controls that work with your account directories. Quickly set up policies, repositories, and package resources in **Automation Ops**, the cloud-first, rich web-based application that keeps your automations in check while giving developers the freedom to design their best work.

"The use of Insights by our RPA Center of Excellence has been critical in our ability to measure performance and then report to our executive team on the value we are providing to the business."

RPA COE Manager,
Leading Fortune 500 Energy Services

Get RPA your way

The cloud native UiPath platform fits your organization's delivery needs, making it the strategic platform choice to start quickly, scale easily, and stay secure while accelerating current and future automation ROI.

Get SaaS from UiPath Automation Cloud

Start instantly, scale infinitely. No installation is required, and you're supported all the way.

Get the full platform on-prem or in public cloud with Automation Suite

One package to install, easy to update, with built-in K8s management and end-to-end support from UiPath.

Get individual products from the UiPath Platform

Install and manage UiPath products separately on your physical/virtual hardware.
